

Passwords have been the primary way to authenticate users regardless of the level of security needed. If higher security is needed, users were forced to create a longer password. Users, however, need to be able to remember their passwords, so duplicate usage and simple, easy-to-remember passwords are common. With **GreenRADIUS**, you can finally get past the limitations of a user's memory, providing simple, flexible, and affordable authentication that anyone can use.

### Enterprise Authentication Security in a Simple Package

**GreenRADIUS** provides the most advanced, yet simple-to-deploy two-factor authentication (2FA) solution on the market. Based on open source components, then hardened and packaged into an easy-to-deploy and easy-to-manage package, **GreenRADIUS** provides a scalable and flexible solution to enhance and extend your authentication systems. With support for RADIUS, LDAP, Wi-Fi, Web APIs and YubiCloud authentication protocols, connectivity to Active Directory or OpenLDAP, and the ability to use new U2F (Universal Two Factor) tokens as well as OATH tokens such as YubiKey or Google Authenticator, **GreenRADIUS** can be configured to meet the needs of diverse organizations.

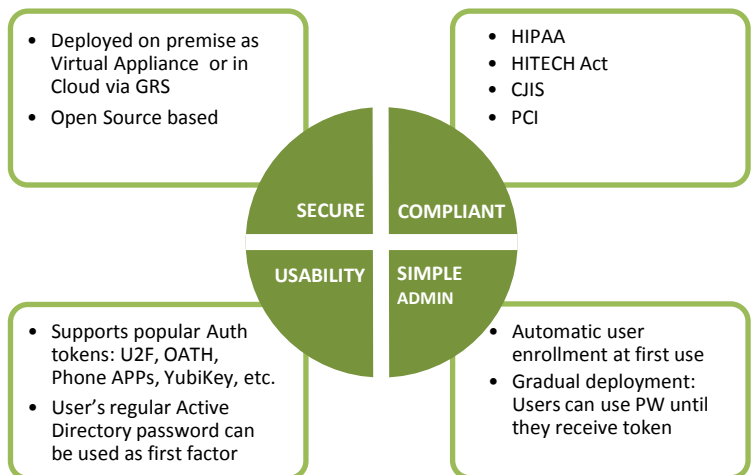

**GreenRADIUS** features web-based administration, enabling easy access and configuration of the server from any updated web browser. Through the **GreenRADIUS** admin console, it is possible to manage users, tokens, and authentication policies, including auto-enrollment and auto-registration for your users. The complexity of deployment is reduced to simply registering the tokens, connecting the server to your infrastructure and letting your users log in normally. Users can be associated to their tokens automatically upon the first new login, without any extra management overhead.

### Key Features of **GreenRADIUS**

- 2FA and password support
- U2F (Universal Two Factor) tokens
- OATH (including Google Authenticator app)
- YubiKey tokens (Standard, NEO & more)
- RADIUS, LDAP Wi-Fi, YubiCloud & Web APIs
- Active Directory/LDAP Connector
- Multi-server/HA capable with server sync
- Auto-deployment of tokens
- Auto-enrollment of users
- Simple VM-based deployment

### Technical Specifications

- Hardened Virtual Machine
- Ubuntu Server 14.04 LTS
- Optional YubiHSM support
- 16GB disk space
- 1GB RAM
- 10,000 users per server

**Whether your organization is a small office or large enterprise, you need to keep your applications free from attacks. GreenRADIUS can do this!**

**GreenRADIUS™ – Secure. Dependable. Affordable.**
